

Assignment: System Analysis & Design – Requirements and Use Case Modeling

Objective

This assignment evaluates your understanding of requirements engineering, prioritization, and use-case modeling as part of system analysis and design.

Part 1: Select a Website & Define Requirements

Choose an existing website. Define 10 system requirements:

- 7 Functional Requirements (what the system should do)
- 3 Non-Functional Requirements (quality attributes)

Use clear phrasing such as: 'The system shall...'

Part 2: Prioritize the Requirements

Prioritize the 10 requirements using one method: MoSCoW, Ranking 1–10, or High/Medium/Low.

Create a table with Requirement ID, Description, Category, and Priority.

Provide justification for priorities in 4–6 sentences.

Part 3: Create a Use Case Document

Choose ONE functional requirement and convert it into a Use Case.

Use the standard Use Case template:

Part 4: Draw the Use Case Diagram

Draw a Use Case Diagram for your website that includes ALL relationship types:

- Include
- Extend
- Generalization

Use any tool (Lucidchart, Draw.io, Visio, StarUML, etc.).

Submission Requirements

Your submission must include:

1. Requirements list (10 items)
2. Prioritization table with justification
3. Use Case Document
4. Use Case Diagram (PDF/PNG or embedded)

Dear Students,

Please note that late submissions or identical/duplicated solutions will result in a grade of zero for the assignment.
